amountsOfTasks : 1
```

Task 1: Make your own animation

- Create your own design in illustrator CC, with your chosen theme
- When it is done, use illustrator clipping/saving tool to extract the elements you want to animate
- Rename the svg files you exported

- Set up a git repository and connect your local folder on your computer to it.
    - Create your index.html + style.scss file
    - Git add . + commit + push it
    - Continue
- Set up your SASS –watch and connect index to stylesheet

- Start implementing your design and make your animations
    - Keyframes, animations, SCSS stuff, css selectors, modal, etc.
